

FIRE ALARM

Your apartment is equipped with a fire alarm connected to the power supply. It also includes batteries to ensure functionality. Do not open the fire alarm yourself, as this may result in a life-threatening electric shock, personal injury, or device damage.

Regularly vacuum the fire alarm with a soft brush and lightly wipe its exterior with a damp cloth to keep it clean and prevent false alarms.

While the device is operational, a red indicator light flashes once per minute.

Testing – The functionality of the fire alarm can be tested by pressing the test button located in the center.

Pause Function – The alarm can be silenced using the test button if it is not an emergency or a false alarm. The red indicator light will flash every 8 seconds as a reminder that the alarm is in pause mode and will return to normal operation after 10 minutes.
